

Transitional Denture Program.

Our transitional denture program is intended to transition a patient from extractions through to a successful completion of precision fit dentures. With this process our patients never have to go without teeth as a temporary transitional denture is provided for immediate use after surgery, and then replaced with a precision set once healed.

Included treatments:

- Initial consultation and treatment planning.
- All necessary communications and coordination with dentist or surgical office providing extraction procedures.
- Fabrication of temporary denture available for immediate insertion at time of extractions.
- Necessary denture check-ups and adjustments after completed surgery.
- After 6 – 12 weeks of healing and tissue recovery, a fabrication of replacement denture.
- Second denture set is designed with Diagnostic Engineered Precision Denture System™ for optimum fit and natural appearance (see attached document).
- All necessary adjustments and check-ups for secondary dentures.

Note:

- i. With completion of treatment patient can keep temporary set as spare set.
- ii. Due to the different health and anatomical presentations individual to each patient, recovery and adaptation time will vary from patient to patient.
- iii. Account balance for the Transitional Denture Program is due at completion of temporary denture.

\$2875 per complete denture program.
No tax as this is a health service.

Terms are cash, cheque, Visa, MasterCard and debit accepted.
